

PRESS RELEASE

Super Flat DC-DC Converter for Wall Mounting

AUTRONIC presents two new members of its Qone family: Qone LFC and Qone HFC. The converters reach a maximum output power of 160 Watt and the standard versions are available for the following input ranges: 6 to 18, 14 to 36, 9 to 40, 32 to 80, and 64 to 160 V as well as the output voltages 3.3, 5, 12, 15, and 24 V.

Qone LFC with its height of only 3TE (15,2 mm) saves space and can be mounted at housing walls or on heat sinks, so it gives the user a lot of construction possibilities. The HFC version has an integrated heat sink and is 40 mm high.

The modules are equipped with cage-clamp connections, so they can be connected quickly and easily without requiring special tools. We further offer a mounting kit for DIN rail mounting as an accessory.

The converters are provided with overvoltage and overtemperature protection, as well as remote on/off. In addition, they are open and short-circuit proof. Further features are Voltage Control, Thermal Warning, Synchronisation for parallel operation, Voltage in Fail, Voltage out Fail and Sense.
